DIGITAL LITERACY

--Project Report--

STUDENT DETAILS

Name: Akshay Saxena

Registration Number: 25BCE10224

Branch & Year: Computer Science Core (CSE CORE) First Year

Course Code: CSE0001

Course Title: Digital Literacy Portfolio

Institution: VIT Bhopal University

Date of submission: 26th March,2026.

Introduction

In today's digital age, digital literacy is an essential skill for students to succeed academically and professionally. As a Student Digital Ambassador, this project was designed to help me guide my peers in understanding and using digital tools responsibly and effectively. The Digital Literacy Portfolio includes five tasks covering awareness, digital presence, coding platforms, communication, and cybersecurity.

Each task involved practical activities such as designing an infographic, creating professional profiles, solving coding problems, drafting professional emails, and studying cybercrime cases. All work was organized in a GitHub repository as part of the final submission. This project helped me improve my technical skills, communication abilities, and awareness of safe online practices.

Task 1: Write-Up- Infographic

For this task, I created a one-page infographic using **Prezi**, an interactive presentation tool. The infographic focused on explaining digital literacy, safe internet practices, and the importance of maintaining a professional online presence.

I designed the content using simple visuals, icons, and short descriptions so that it would be easy for students to understand. The goal was to make the information engaging and informative at the same time. However, I initially found it challenging to manage the zoom transitions and position elements properly without making the design confusing. It took some time to arrange the content in a clear and structured format.

This task helped me learn how to present information effectively using digital tools and improved my creativity in designing educational content. Overall, using Prezi improved my creativity and gave me experience with a different type of presentation tool that can be useful for future academic work.

Task 2: Write-Up-Digital Portfolio

In this task, I created and updated profiles on GitHub, LinkedIn, Kaggle, and ResearchGate. Each platform serves a different purpose: GitHub is used for sharing coding projects, LinkedIn is for professional networking, Kaggle is for data science practice, and ResearchGate is used for academic research and collaboration.

On GitHub, I developed a special REPOSITORY that includes my name, branch, and learning goals, which will help me showcase my projects and track my coding progress. On LinkedIn, I completed my Education section by adding my current degree, institution, and expected graduation year, making my profile suitable for professional visibility.

Kaggle introduced me to the field of data science by providing access to datasets, notebooks, and competitions, while ResearchGate allowed me to explore academic research and understand how knowledge is shared among scholars.

I plan to use these platforms actively over the next four years to build my portfolio, connect with professionals, participate in competitions, and explore research opportunities. This task highlighted the importance of having a strong digital presence.

Task 3: Write-up-Platforms

For this task, I explored coding and collaboration tools like HackerRank and Google Workspace respectively. I created an account on HackerRank and solved the "Solve Me First" problem along with several other beginner-level problems using Python and Java. This helped me improve my programming logic and problem-solving skills.

In addition, I created and conducted a Google Form quiz titled **"Digital Literacy Awareness Check "** using Google Workspace. The quiz included both multiple-choice and short-answer types. The responses were automatically recorded in a linked Google Sheet, making data collection efficient.

These platforms are extremely useful for academic purposes. HackerRank helps in improving coding skills, while Google Forms and Sheets are valuable for conducting surveys, quizzes, and organizing information. This task enhanced my understanding of collaborative tools and their practical applications in education.

Task 4: Write-up-Email-Etiquettes

A common issue in digital communication is the misuse of email tone and structure. For example, a student sending an informal email to a professor without a subject line or proper greeting can create confusion and appear unprofessional. This can lead to delayed responses or even being ignored.

In my task, I wrote two professional emails: one requesting an assignment extension from a professor and another expressing interest in a summer internship opportunity. Both emails followed proper structure, including clear subject lines, professional greetings, well-organized content, and appropriate sign-offs.

I also created a checklist of do's and don'ts for responsible social media use. One common issue in digital communication is sending informal or unclear emails, which can create misunderstandings or appear unprofessional. This can be avoided by following proper email etiquette and maintaining a respectful tone.

This task helped me understand the importance of clear and professional communication in academic and professional environments.

Task 5: Write-up-Cybercrime

For this task, I created a case study on ransomware, a type of cybercrime where attackers block access to data and demand payment to restore it. The case study explained how ransomware attacks occur, who is targeted, and their consequences.

I also developed a prevention checklist with important online safety rules, including avoiding suspicious links, using strong passwords, and securing financial transactions.

What surprised me most was how easily ransomware can spread through simple actions like downloading unsafe files. As a result, I will be more cautious while browsing and ensure that I follow safe online practices. This task increased my awareness of cybersecurity threats and prevention methods.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in modern education. Through practical tasks, I learned how to use digital tools, build a professional online presence, communicate effectively, and stay safe online.

The experience has made me more confident in guiding others as a Student Digital Ambassador. I will continue to apply these skills in my academic journey and help others become responsible digital users.
